Advancing Natural Hydrogen & Copper in Tier-1 Jurisdictions

NATURAL HYDROGEN
Western Newfoundland

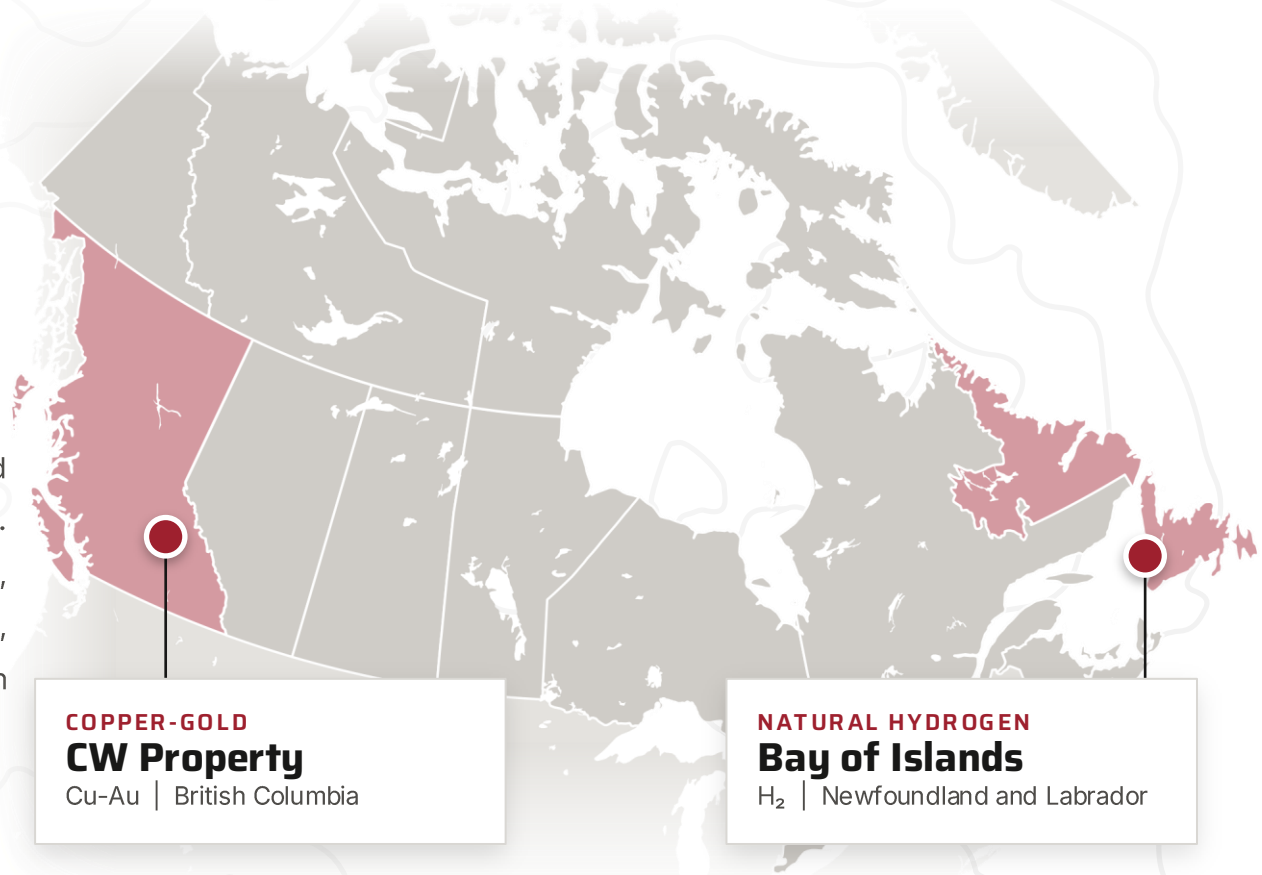

COPPER
British Columbia

TIER-1
Jurisdictions

INTRODUCTION

Our Mandate

Natural hydrogen is emerging as a new source of clean energy, generated underground, most commonly when groundwater reacts with iron-rich rock. At Brutus Mining, our focus is on natural hydrogen in western Newfoundland, where we hold an option to acquire 100% of the Bay of Islands Project, alongside copper-gold exploration in British Columbia, where electrification and infrastructure continue to drive long-term copper demand.

Investment Highlights

Natural Hydrogen Exposure

- Hydrogen demand is near 100 Mt a year; under 1% is low-emission
- Natural hydrogen forms underground, with no manufacturing step
- Capital is moving into natural hydrogen, led by Koloma

Bay of Islands Project

- Three licences, 334 claims
- Western margin of the Bay of Islands Ophiolite Complex
- Hydrogen measured at Tablelands springs in the same complex

Copper-Gold in British Columbia

- CW Property located near Kamloops, BC
- Five MINFILE showings with copper and gold mineralization
- S&P Global projects a 10 Mt copper supply deficit by 2040

Tier-1 Jurisdictions

- Projects in Newfoundland and British Columbia, Canada
- Road access: Route 450 to Bay of Islands, Highway 5 to CW
- Reduced sovereign and geopolitical risk versus emerging markets

Experienced Leadership

- Combined expertise across capital markets, deal-sourcing & exploration
- Proven track record advancing exploration-stage public companies
- CEO brings 25+ years in mining, including investment banking at TD Securities

Near-Term Catalysts

- C$3.0M closed October 13, 2026
- Advancing the Bay of Islands Project
- CW soil assays pending: 1,196 samples at AGAT Laboratories

The Hydrogen Market

Demand keeps climbing, and natural hydrogen is moving toward first production.

~100 Mt	<1%	US$0.5–1	~US$1B
Global hydrogen demand in 2024, up 2% in a year[1]	Share of global hydrogen supply that is low-emission[1]	Estimated wellhead cost per kg of natural hydrogen[2]	Invested in natural hydrogen to date, nearly half in the US[2]

HYDROGEN IS MOVING

Milestones · Past · What's ahead

2012 — Mali field starts powering a village with natural hydrogen

Feb 2024 — Koloma raises a US$245.7M Series B

Jan 2025 — USGS maps US geologic hydrogen potential

Jan 2026 — MAX Power confirms Canada's first natural hydrogen system, then raises C$55.5M

Jan 2026 — EU clears €200M German fund for Canadian hydrogen; Canada matches

Sept 2026 — QIMC records 30.0% hydrogen at Bennett Hill, Nova Scotia

Fall 2026 — **Brutus lists on CSE and Frankfurt, closes C$3.0M, signs Bay of Islands option**

Early 2027 — Koloma to drill its first well in the Philippines' Zambales ophiolite region

2027 — €400M Canada–Germany auction to award ten-year Canadian supply contracts

2028 — France targets the first industrial-scale natural hydrogen production

2030 — Canada's Hydrogen Strategy targets 10–20% of its 2050 goals, with new hubs

2050 — Canada aims to be a top-three global producer, at up to 20 Mt a year

INVESTMENT THESIS

Natural Hydrogen

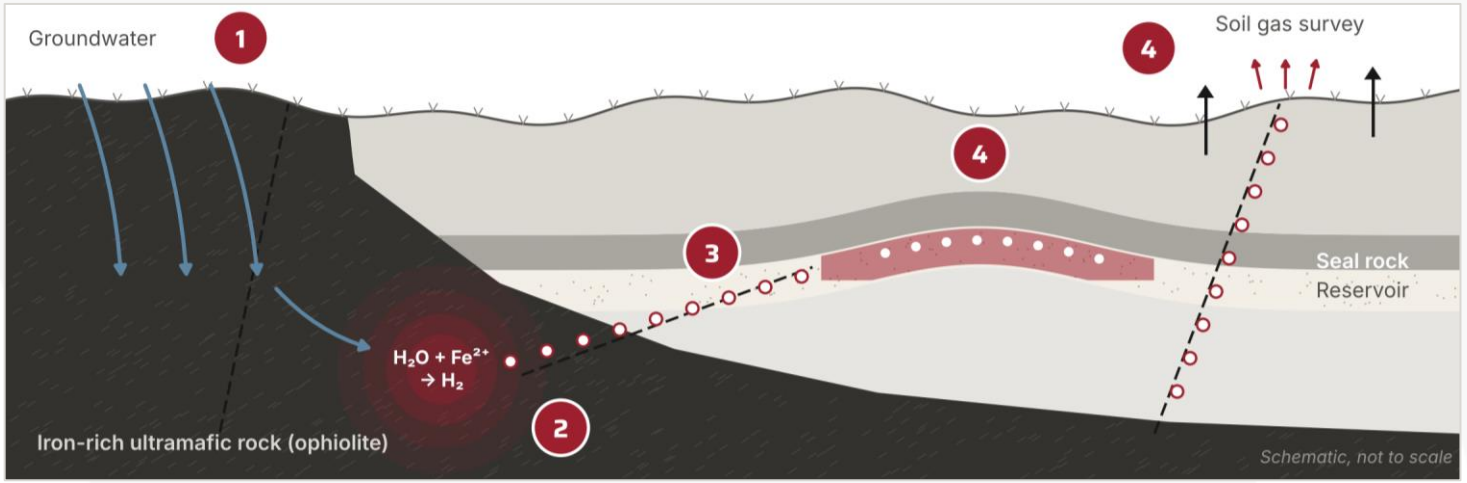

98%[1] Hydrogen in gas from Mali's main reservoir

2012[1] Mali well powering a village since

2025[2] First USGS map of US geologic hydrogen

Hydrogen burns without CO_2

How Natural Hydrogen Forms

1 Infiltration
Groundwater seeps into iron-rich ultramafic rock along faults and fractures.

2 Serpentinization
The rock reacts with the water and releases hydrogen gas.

3 Migration
Hydrogen moves upward through faults, fractures and permeable rock.

4 Trap or Seep
It collects beneath sealing rock or vents at surface, where soil gas surveys can detect it.

Canadian Projects

Natural Hydrogen in Canada

Saskatchewan | MAX Power

Canada's first well drilled for natural hydrogen. A flow test at Lawson confirmed 16.8% to 19.07% hydrogen (January 2026).

Nova Scotia | QIMC

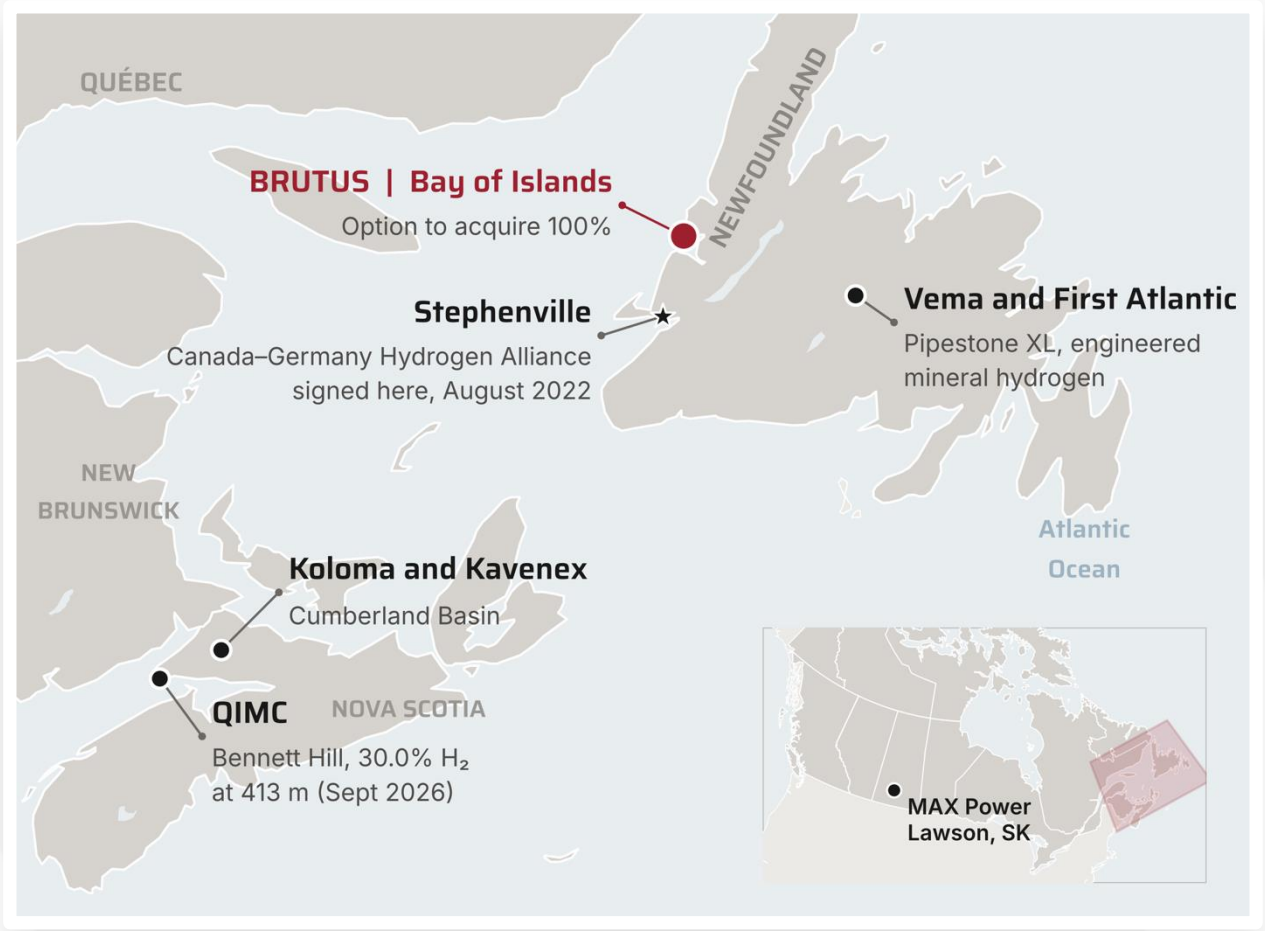

A record 30.0% hydrogen at 413 m at Bennett Hill (peak mud-gas reading, September 2026), with soil gas work across a 43-km corridor.

Nova Scotia | Koloma

Koloma, backed by Bill Gates' Breakthrough Energy Ventures, has partnered with Kavenex Energy in the Cumberland Basin, where Primary Hydrogen also staked ground in 2026.

Newfoundland | Vema and First Atlantic

Vema Hydrogen and First Atlantic Nickel signed a non-binding LOI in June 2026 to develop engineered mineral hydrogen at Pipestone XL.

Sources: MAX Power Mining, Jan. 16, 2026; QIMC, Aug. 5 and Sept. 1, 2026 (preliminary mud-gas readings, pending laboratory analysis); Primary Hydrogen, Aug. 17, 2026; First Atlantic Nickel & Cobalt, June 8, 2026; Natural Resources Canada, Aug. 23, 2022 (Canada–Germany Hydrogen Alliance).

WESTERN NEWFOUNDLAND

The District

Tablelands Springs

In the same ophiolite, ultrabasic springs carry 0.06 to 1.20 mg/L of dissolved hydrogen, evidence of serpentinization today.

Ophiolite-X | First Atlantic Nickel

500 claims, about 12,500 ha, on the Blow Me Down and Lewis Hills massifs, acquired for geologic hydrogen and critical minerals (December 2025).

Luma Hydrogen (private)

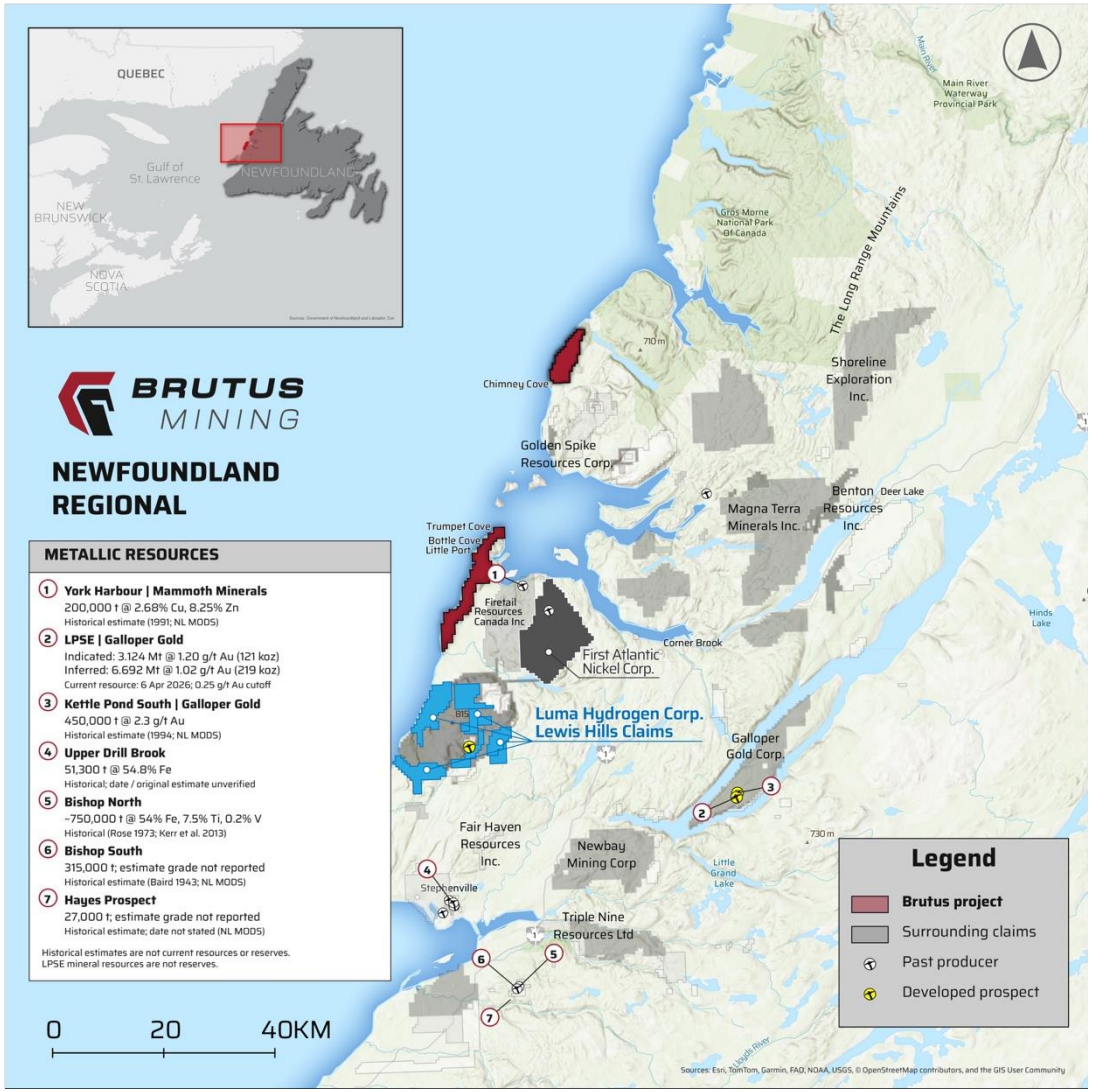

10 licences, about 126 km², over the Bay of Islands Ophiolite Complex and a northern ophiolite sequence (August 2026).

Benton and Metals Creek

Staked six natural hydrogen projects on the west coast in March 2026, including Bay of Islands, and in September 2026 reported soil gas anomalies at Smoking Gun and Parson's Pond.

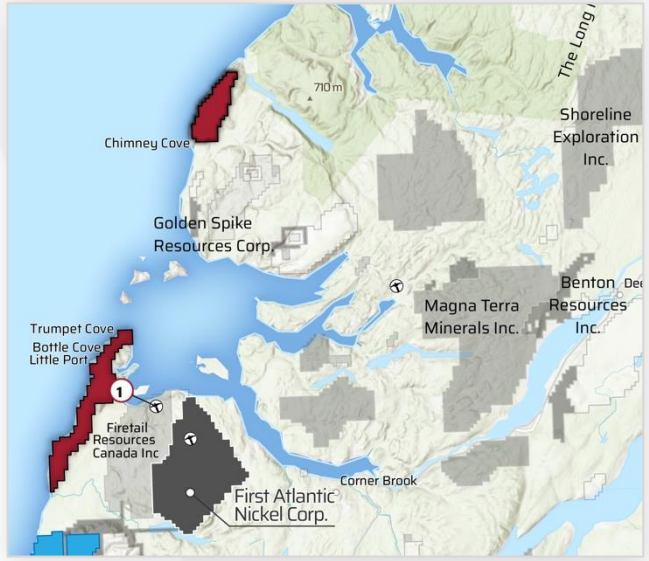

Sources: Szponar et al., Icarus 224 (2013); First Atlantic Nickel, Dec. 11, 2025; Luma Hydrogen, Aug. 21, 2026; Benton Resources and Metals Creek Resources, Mar. 25 and Sept. 9, 2026.

Bay of Islands Ophiolite

Bay of Islands Project

334	Claims in three licences
83.5 km²	Total licence area, western Newfoundland

PROJECT HIGHLIGHTS

01 Hydrogen Measured in the Same Complex

Springs at the Tablelands, part of the Bay of Islands Ophiolite Complex, carry 0.06 to 1.20 mg/L of dissolved hydrogen. The reaction is running today.

02 Pathways to Surface

Trace live oil and bitumen at Little Port, pyrobitumen at Bottle Cove, hydrocarbon-stained limestone at Trumpet Cove and possible gas venting on the floor of the bay.

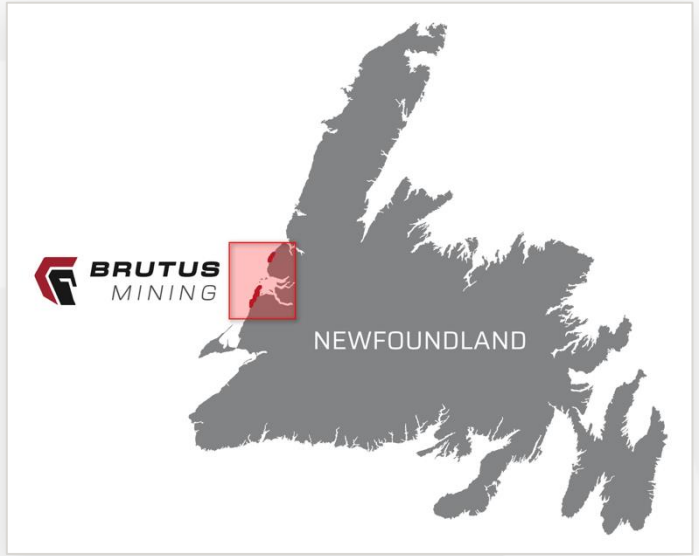

03 A District Drawing Capital

First Atlantic Nickel, Luma Hydrogen, and Benton Resources with Metals Creek have all taken natural hydrogen ground in western Newfoundland since December 2025.

04 Coastal Licences With Road Access

Two licences along the western margin of the complex. Route 450 from Corner Brook reaches the southern licence.

PROJECT LOCATION

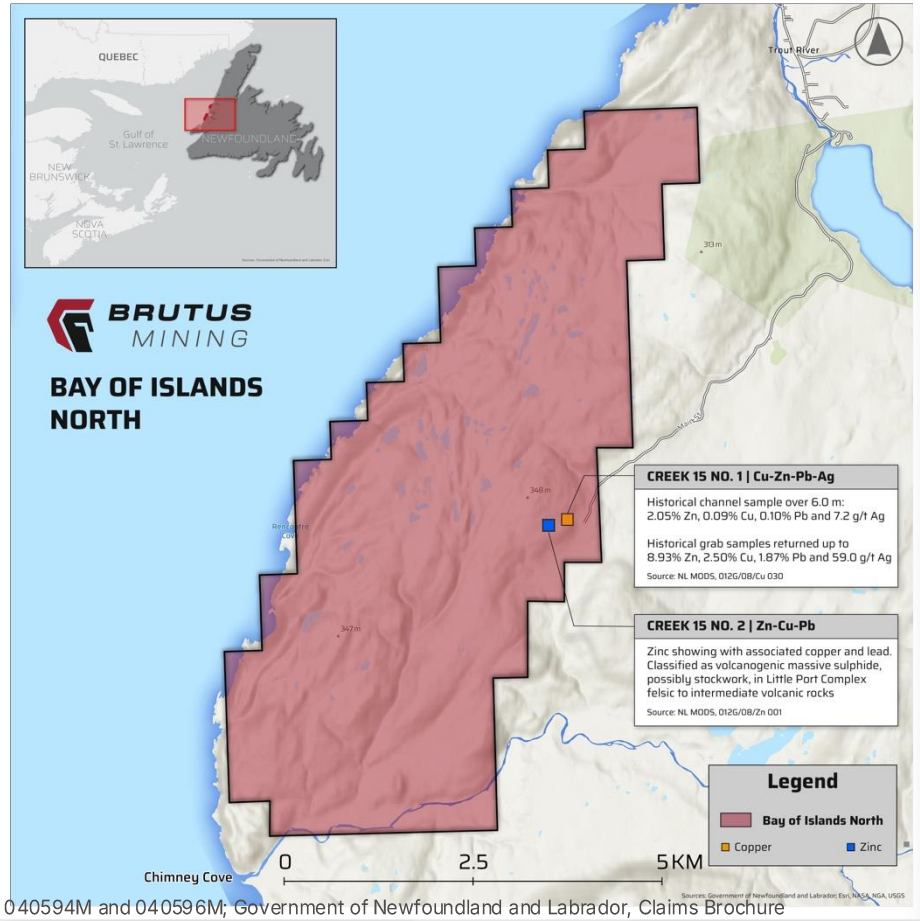

Sources: Brutus Mining Inc., news release announcing the Bay of Islands option; Szponar et al., Icarus 224 (2013); Hicks, The Historyof Petroleum Exploration in Western Newfoundland, Government of Newfoundland and Labrador; First Atlantic Nickel, Dec. 11, 2025; Luma Hydrogen, Aug. 21, 2026; Benton Resources and Metals Creek Resources, Mar. 25, 2026.

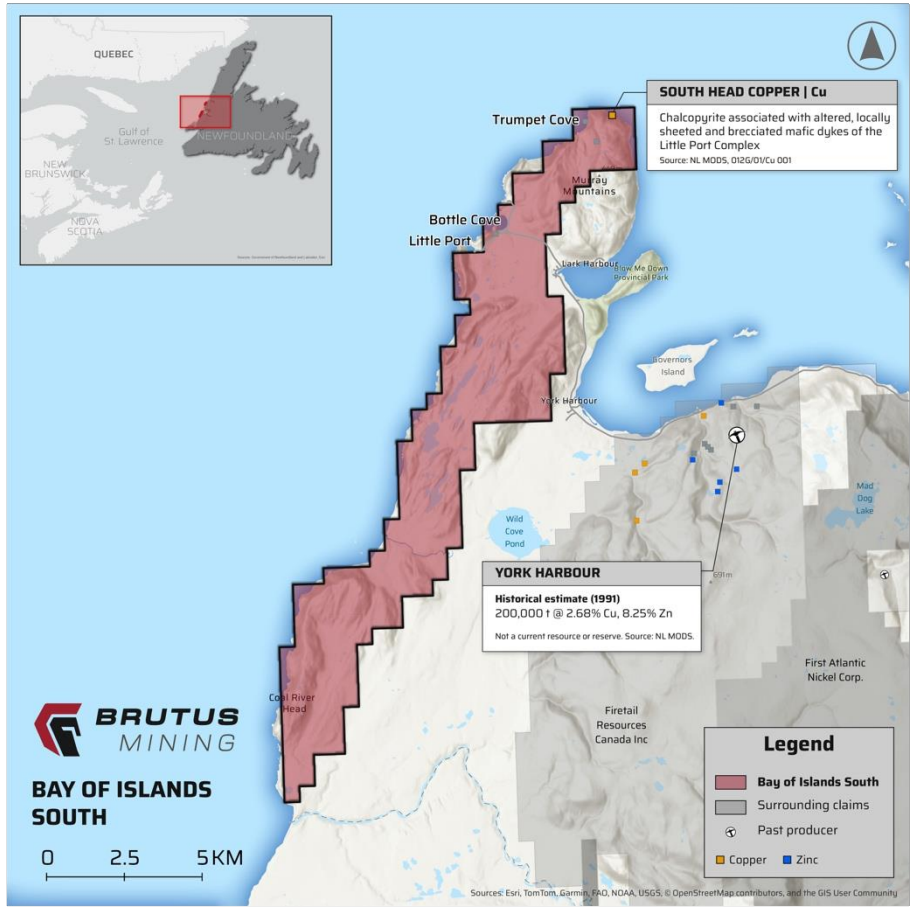

Bay of Islands Licences

88 CLAIMS
North Licence 040596M

234 CLAIMS
South Licence 040594M

83.5 KM²
334 claims in total

Sources: NL Mineral Lands registry (GeoAtlas), licences 040594M and 040596M; Government of Newfoundland and Labrador, Claims Brochure 2024 (25 ha per claim); Brutus Mining Inc., option agreement with Benton Resources Inc. (TSXV: BEX) and Metals Creek Resources Corp. (TSXV: MEK).

Bay of Islands Geology

Ophiolite Setting

The licences lie along the western margin of the Bay of Islands Ophiolite Complex, ancient ocean crust and upper mantle about 485 million years old, beside four ultramafic massifs.

Active Serpentinization

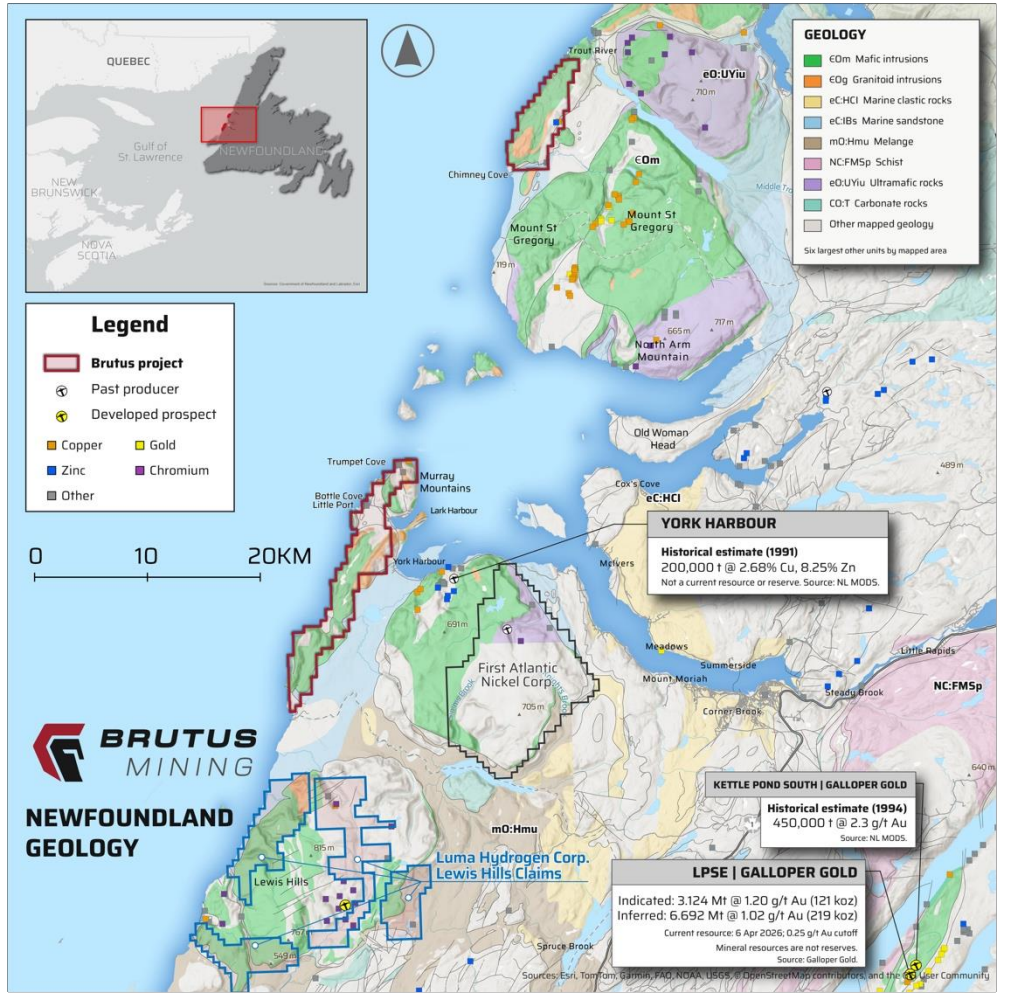

At the Tablelands, part of the same complex, researchers measured dissolved hydrogen of 0.06 to 1.20 mg/L in high-pH spring waters, evidence of serpentinization today.

Fluid Pathways

Provincial records describe trace live oil and bitumen at Little Port, pyrobitumen at Bottle Cove, hydrocarbon-stained limestone at Trumpet Cove and possible gas venting on the floor of the Bay of Islands.

Ready to Test

Brutus's first program will generate the first hydrogen data on the licences, in the same complex where Tablelands springs carry hydrogen.

Copper

The Backbone of Modern Infrastructure

42Mt[2]	Annual demand by 2040
50%[2]	Demand growth to 2040
10Mt[2]	Supply deficit by 2040

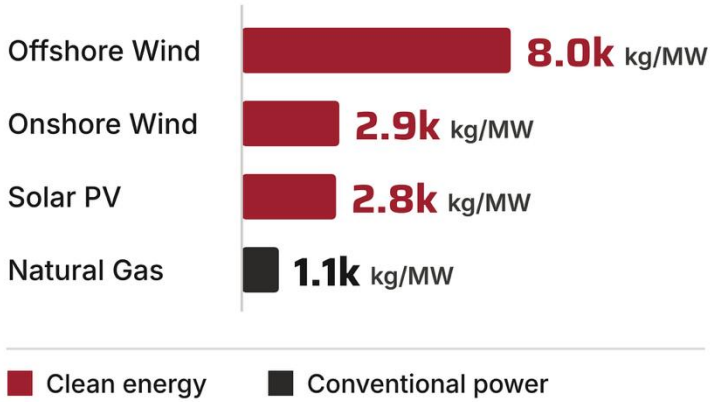

Copper is non-negotiable for the global energy transition

Why Copper Demand Is Structural, Not Cyclical

COPPER INTENSITY

Power Generation

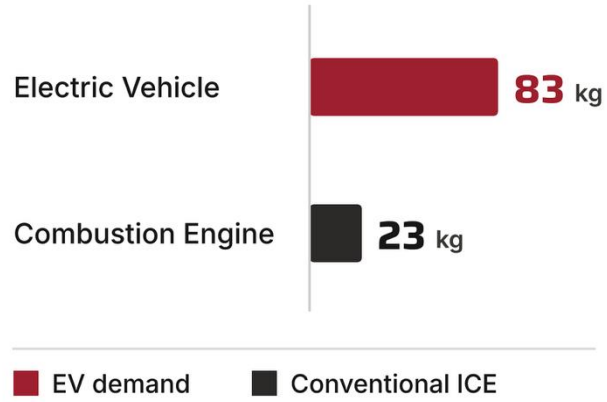

Kilograms per megawatt installed

COPPER INTENSITY

Vehicles

Kilograms per vehicle

- Essential for wiring, renewables, EVs and grids, with no viable substitute at scale[1]
- Offshore wind needs about 8 tonnes of copper per MW, about 7 times a gas-fired plant[4]
- EV chargers add demand: about 0.7 kg of copper each, and up to 8 kg per fast charger[3]

Sources: 1: International Copper Association (ICA) **2:** S&P Global, Copper in the Age of AI (Jan. 8, 2026) **3:** ICA and IDTechEx (2017), copper per EV charger and per vehicle **4:** IEA, The Role of Critical Minerals in Clean Energy Transitions (2021), copper per MW.

COPPER-GOLD

CW Property

Option to 100% Interest

2,895 ha	Five contiguous claims, 100 km north of Kamloops
5	Historical copper-gold showings
1,196	Soil samples collected Sept. 21 to Oct. 23, 2026. Assays pending.

EXPLORED SINCE 1916

Past operators include Noranda (1972), Kerr Addison (1988), Teck (1992 to 1993), Vendetta (2008 to 2009) and Black Mountain (2010 to 2012).

PROJECT HIGHLIGHTS

01 Five Showings

McCarthy, Honeymoon, Queen Bess, Axel 1 and Axel 2: copper-gold, some with silver, lead and zinc, in the Eagle Bay Assemblage and Fennell Formation.

02 Past Production at Queen Bess

A reported 73 tonnes of ore mined and shipped from 1917 to 1919, recovering 52,222 g of silver, 13,789 kg of lead and 12,503 kg of zinc.

03 McCarthy Trench, 1992

The discovery trench returned 6.6 m at 1.1% Cu, including 1.0 m at 2.24% Cu and 0.315 g/t Au. A grab sample from Trench C assayed 9.35% Cu and 0.411 g/t Au.

04 2025 Program

785 soil and 35 rock samples, prospecting, mapping and 11.1 line-km of ground magnetics. Rock samples returned trace to 4.91% Cu.

PROJECT LOCATION

Year-Round Access

Highway 5 and existing forest service roads. Kamloops is a mining hub with exploration services and contractors.

Sources: Brutus Mining Inc. news release, Oct. 19, 2026, reviewed and approved by Luke van der Meer, P.Geo., Qualified Person; NI 43101 Technical Report on the CW Property (D. Strickland, P.Geo., effective Jan. 6, 2026).

COPPER-GOLD

CW Geology

Option to 100% Interest

Property Overview

Five contiguous mineral claims (2,894.56 ha) located 100 km north of Kamloops in the Clearwater-Vavenby area. Option to earn 100% interest in the CW Property.

Geological Setting

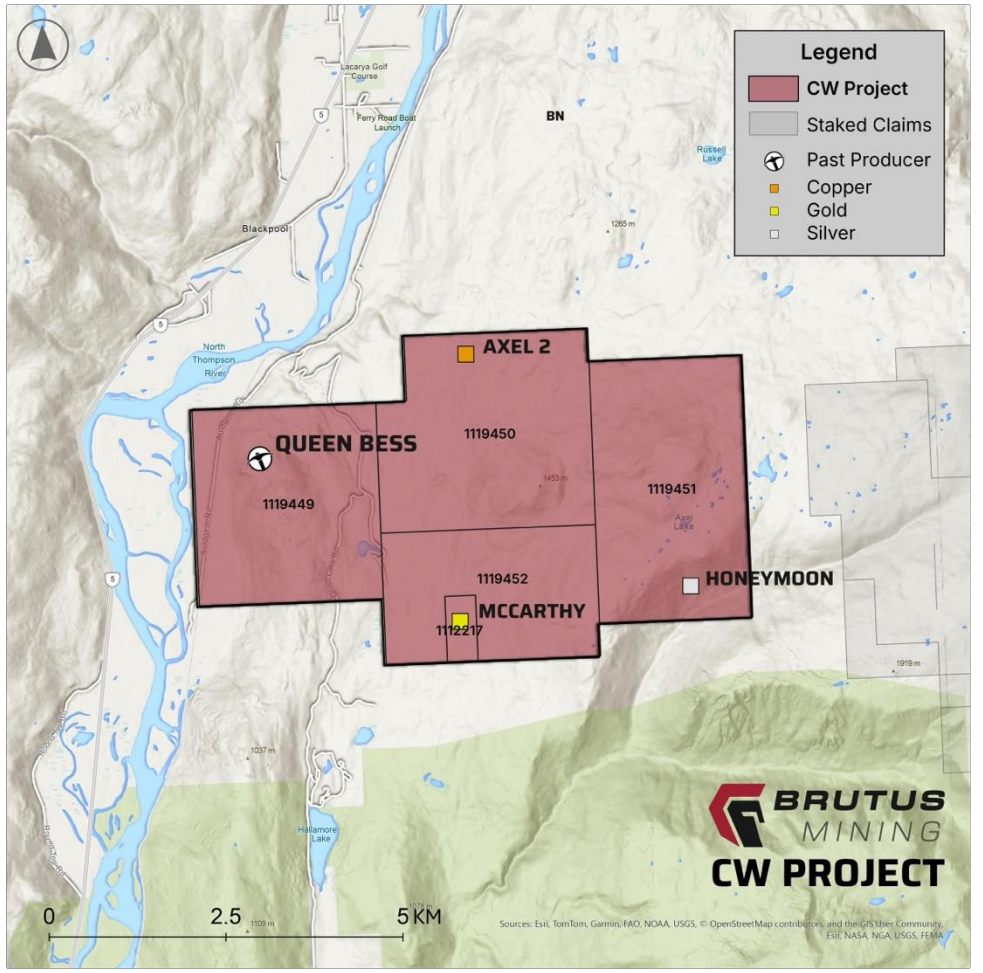

Hosted within Paleozoic metasedimentary and metavolcanic rocks of the Eagle Bay Assemblage and Fennell Formation, a belt prospective for both VMS and structurally controlled gold-bearing vein deposits.

Mineralization & Results

Cu-Au ±Ag-Pb-Zn at five MINFILE showings. McCarthy trench: 6.6 m at 1.1% Cu, including 1.0 m at 2.24% Cu and 0.315 g/t Au (Teck, 1992). 2025 rock samples: trace to 4.91% Cu.

Access & Infrastructure

Excellent year-round access via Highway 5 and existing forest service roads. Kamloops (pop. 98,000) is a regional mining hub with full exploration services and contractors.

Management & Advisors

MANAGEMENT AND BOARD

CHRISTOS DOULIS

CEO & Director

- 25+ years in metals and mining
- Former VP, Investment Banking (Mining), TD Securities
- Award-winning research analyst, Stonecap Securities and PI Financial
- President and director, Bayhorse Silver (TSXV: BHS)

RANBIR KALAN

Director

- 10+ years in capital markets
- Corporate development, marketing and communications
- Public companies in mining, green energy, AI and technology
- Aerospace Engineering, Toronto Metropolitan University

WARREN STANYER

Director

- 29+ years in uranium, nickel, gold, copper, cobalt and lithium exploration
- Former CEO, Northern Continental, acquired by Hathor in 2009
- Former director, Alpha Minerals, a Patterson Lake South partner
- President, CEO and director, Nevada Sunrise Metals (TSXV: NEV)

SIMON TSO

Chief Financial Officer

- Principal, Athena Chartered Professional Accountant Ltd.
- Co-founder, Zeus Capital, a corporate finance firm
- Has acted as Controller or CFO for public companies
- CFA Charterholder and CPA; B.Com., UBC Sauder

ADVISORS

GORDON ROBB

Advisor

- CEO and director, ESGold Corp.
- 10+ years in fixed income and mining capital markets (ICAP, BGC, TMX)
- Former Business Development and IR Manager, Scottie Resources (TSXV: SCOT)

LUKE VAN DER MEER, B.SC., P.GEO.

Advisor

- Geological consultant who has served as the Company's QP under NI 43-101
- Former VP Exploration and QP, Northway Resources and Lodestar Battery Metals
- Author of the 2022 NI 43-101 report on York Harbour, Newfoundland

WARNING

This management presentation was prepared as a summary overview only of the current affairs of Brutus Mining Inc. (the "Company" and "Brutus Mining") and was not prepared for the purpose of assisting prospective investors in making a decision to invest in any security. The Company does not make any representation as to the completeness, truth or accuracy of the information contained in this presentation. The Company expressly warns readers not to rely on this information for investment purposes. The information contained herein is not and should not be construed as either a public or private offer or solicitation to purchase securities in the capital stock of the Company, nor as legal, financial or tax advice. The reader is referred to their professional legal, financial and tax advisors regarding investment related decisions respecting the securities of the Company. No securities regulatory authority or similar authority has reviewed or in any way passed on the accuracy or adequacy of this presentation.

FORWARD LOOKING INFORMATION

Certain statements in this presentation constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995 and Canadian securities legislation. Such forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company, or other future events, including forecast production, earnings and cash flows, to be materially different from any future results, performances or achievements or other events expressly or implicitly predicted by such forward-looking statements. Such risks, uncertainties and other factors include, but are not limited to, factors associated with fluctuations in the market price of copper and gold, mining industry risks, the early stage of natural hydrogen as an exploration target and the absence of established methods for estimating natural hydrogen resources, uncertainty regarding the regulatory and tenure framework for natural hydrogen in Newfoundland and Labrador, the risk that hydrogen is not present in meaningful concentrations or volumes, recent operating losses, uncertainty of title to properties, environmental risks and hazards, proposed legislation affecting the mining industry, litigation, governmental regulation of the mining industry, properties without known mineable reserves, uncertainty as to calculations of reserves, mineral deposits and grades, requirement of additional financing, uninsured risks, competition, dependence on key management personnel, potential volatility of market price of the Company's common shares, dilution and certain anti-takeover effects. Such information contained herein represents management's best judgment as of the date hereof based on information currently available. The Company does not intend to update this information and disclaims any legal liability to the contrary.

The Company has no mineral resources or mineral reserves on the CW Property or the Bay of Islands Project, has not estimated any natural hydrogen resources and has not completed any drilling on either property. The Company holds options on both properties and does not hold title. Information on other companies comes from their public disclosure; the Company has no interest in their properties, and results there are not necessarily indicative of results on the Company's properties. Historical results, estimates and resources shown in this presentation, including on maps, come from public records and previous operators. They have not been verified by the Company's Qualified Person, are not current, and are not indicative of mineralization on the Company's properties.

No securities regulator has reviewed or approved the contents of this presentation. Readers are cautioned not to place undue reliance on forward-looking statements.
